oniLibrary

FIELD GUIDE

Your stories. In one place.

— Manga · Manhwa · Webtoons

— Comics · Books · PDF

— Offline downloads

— Private vault

— Reading statistics

— Extensible sources

1 · Building your library

oniLibrary keeps every story in one place. Open the Library tab to see your grid of works, grouped by categories you define.

Import local files with the + button: CBZ / ZIP archives, folders of images, EPUB books and PDF documents are all parsed on-device and stored privately in your browser storage. Nothing is uploaded.

Long-press any cover to enter selection mode — you can then move works into categories, change their reading status, hide them in the private vault, or delete them.

2 · The reader

Tap the center of any page to show or hide the reading chrome.
Side taps flip pages (direction-aware for right-to-left manga).

The bottom toolbar gives you fit modes (width, height, screen, original), zoom up to 2x with pan, rotation, brightness and the per-series reading settings sheet.

Four documented presets configure everything at once:
Manga (RTL, paged, black), Comics (LTR, white), Webtoon (vertical, gapless) and One-handed (larger pages, auto-advance).

3 · Books & PDFs

EPUB books open in a typographic view with adjustable text size, embedded images, lists, quotes and full RTL support for Persian chapters. Progress is remembered as a scroll ratio per chapter.

PDF documents render page by page on canvas — zoom stays sharp because pages redraw at your display's pixel density. The page slider, bookmarks and reading position all work exactly like manga chapters.

This very document is a PDF being rendered that way.

4 · Downloads & offline

Mark chapters for download from the chapter list or the reader menu. The Downloads tab shows live progress, speed and the storage bar.

Rules from Settings apply: Wi-Fi-only mode and the number of parallel downloads. Finished chapters get the offline badge in the reader, so you always know what is safe to read without a network.

5 · Sources & extensions

Discover browses catalogs like MangaDex. Add works to your library with one tap; updates are checked from the Updates tab.

Extensions add new sources. Every extension shows trust and compatibility badges — official and verified ones install without a prompt, community ones ask for confirmation first.

6 · Privacy by default

The vault hides chosen works behind a PIN (with optional biometric unlock and auto-lock when the app goes to the background).

Statistics, history and backups all live on your device. Create a portable .onibackup file from More > Backup, and restore it on any device later.

Happy reading!
